FUTUREME · UPDATED PROJECT CASE STUDY

FutureMe AI

From “I think” to “I tried.”

ช่วยให้นักเรียนเข้าใจตัวเอง ก่อนตัดสินใจอนาคต

A runnable decision-support prototype for Thai secondary and vocational students.

RESEARCH-INFORMED · NOT VALIDATED GUIDANCE

Several hypotheses.
One reversible next step.

Explore the next step—not one final answer.

Research · Data lineage · Product · Decision logic · Validation

Students decide before they have evidence

Thai education has visible forks; the day-to-day reality behind each route is harder to test.

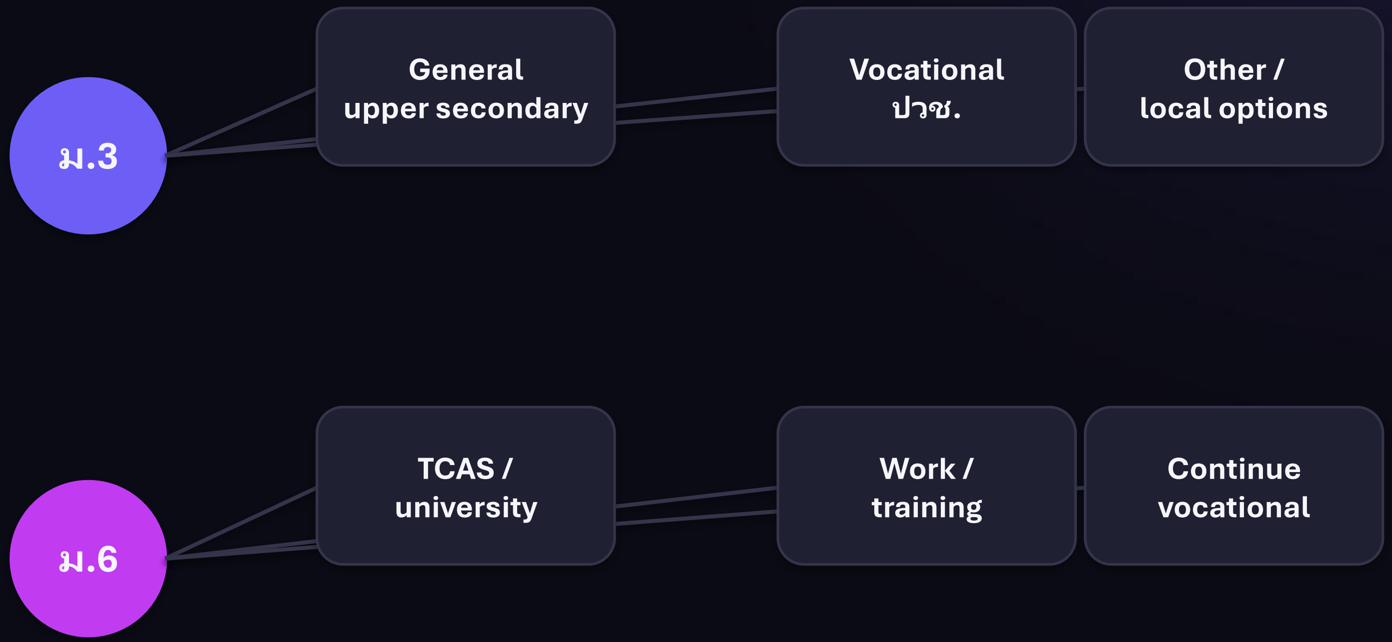
Decisions arrive before experience.

FutureMe’s design hypothesis

Students need a safe way to test a direction before committing time, prerequisites and money.

PRIMARY USER RESEARCH: NOT YET RUN

CONSEQUENTIAL CHOICE POINTS



Criteria vary by school, campus, programme and admission year.

Sources: Thai curriculum, VEC catalogue, TCAS70; FutureMe source audit (24 Jul 2026)

The cost is mismatch—and a moving target

The evidence supports earlier exploration, not a promise of one perfect match.

56%

work outside their field of study

TDRI CONTEXT

27%

work below their skill or qualification level

SAME POPULATION

39%

of core skills expected to change by 2030

WEF EMPLOYER SURVEY

Design implication: help students test, compare and revise—before a direction becomes expensive to change.

Caution: the TDRI public page describes a broadly highly educated group and does not expose its denominator or method. These figures are problem context, not a FutureMe performance baseline.

Sources: TDRI (2025); WEF Future of Jobs (2025); scopes differ and are not combined causally

The data pipeline keeps limits attached

Source dates, unknowns and integrity checks travel with every demo record.

Controls that stay visible

PROVENANCE → CHECKSUMS → UNKNOWNS → FRESHNESS

1,961 options / 1,375 institutions; 140 mapped. TCAS, fees, scholarships and living costs remain unavailable.

Sources: education-data registry + MHESI/OVEC; checked 11 Aug 2026

The idea evolved from matching to learning

Each research input changed a product decision.

1 → 2 → 3 → 4 → 5

PROBLEM

Study–work mismatch is not one-to-one

THEORY

RIASEC gives a six-part interest language

CONTEXT

Socratic + STAR surface lived evidence

ACTION

A mini mission tests self-report

PRODUCT

0–3 routes + a 30-day experiment

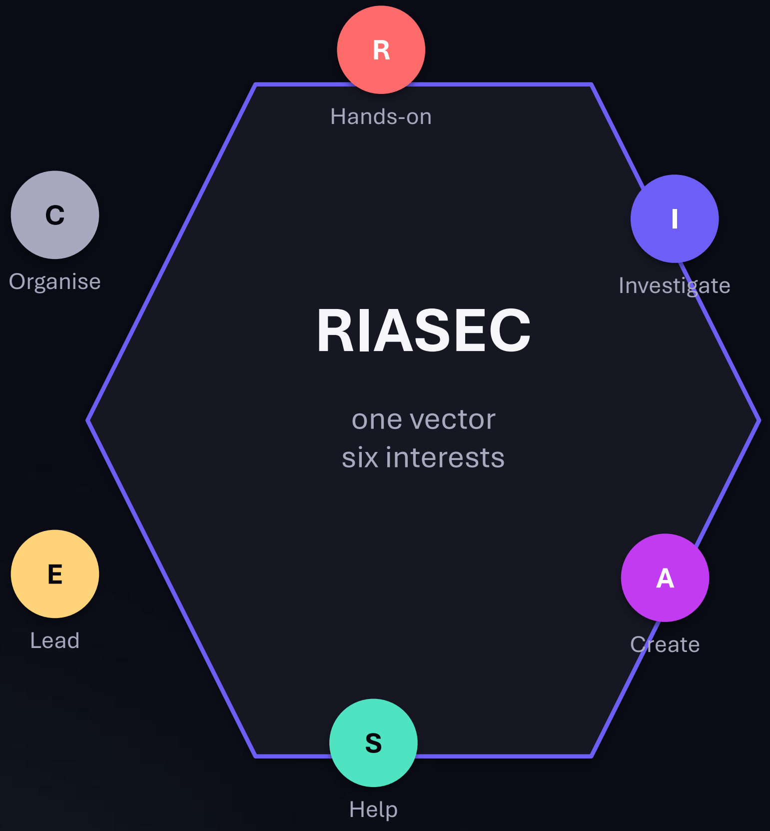
FutureMe is an **evidence loop**, **not a career oracle.**

Conversation frameworks guide prompts; they do not validate the questionnaire.

Sources: FutureMe research summaries; Holland RIASEC; interview framework files

Research shaped the model—and what we rejected

Only constructs that change the product's output earn a place in the assessment.



INCLUDED	**RIASEC interest vector**	A starting hypothesis for exploration
DESIGN INPUT	**Socratic prompts + STAR**	Conversation scaffolds—not psychometrics
DEFERRED	**Work values**	Route catalogue lacks value profiles
REJECTED	**MBTI-type matching · VARK labels**	Unstable types / weak evidence

The live 30-item instrument and both future banks remain unvalidated for real learners.

Sources: Holland (1997); O*NET Interest Profiler Manual; FutureMe methodology

Five product rules follow directly from the evidence

Research is useful only when it changes what the product does.

01	**Interests still move in adolescence**	→	Offer hypotheses—not a verdict; keep routes reversible
02	**Self-report is only one signal**	→	Add a scenario mission that can agree or disagree
03	**AI recommendations can become opaque**	→	Rules decide; show evidence, unknowns and contradictions
04	**Admissions and labour data expire**	→	Carry source, scope, last-checked date and freshness
05	**The users are minors**	→	Guest-first, browser-local; consent before saving or sharing

Private by default · Evidence before confidence · One useful next action

Sources: Source audit, RAG data spec, interview research, privacy design

FutureMe turns reflection into a low-stakes experiment

The experience accumulates evidence instead of manufacturing certainty.

1 → 2 → 3 → 4 → 5

1 REFLECT
30 live items
+ first-answer follow-ups

2 TRY
One scenario mission

3 EXPLORE
0–3 routes with reasons

4 COMPARE
Evidence · trade-offs
unknowns · sources

5 ACT
A reversible 30-day plan

EVIDENCE — NOT CERTAINTY

A learner can revise answers, override the mission, compare routes or stop.

Source: implemented FutureMe guest journey

Each step gives the learner control

The output at every stage is provisional, inspectable and editable.

1. **What do I like— and what follows?**
   30 items; answer 1 reorders the next two
2. **Does action agree?**
   Mission can corroborate or contradict
3. **What can I explore now?**
   Tier gate · evidence · 0–3 routes
4. **Why these options?**
   Reasons · evidence · unknowns · sources
5. **What can I test next?**
   30-day reversible experiment

CONTROL LOOP · change answers · choose another mission · compare again · keep, park or drop a route

Source: implemented UX flow and session behavior

Rules decide. AI explains. Research stays gated.

The live decision path, future research inputs and production plan remain separate.

TODAY · IMPLEMENTED

Interactive roadmap

Rules decide. Validated data grounds. AI explains.

Sources: current code + education-data registry; Python backend and production RAG are not connected

Recommendation logic is explicit and auditable

Same answers, same routes. The model cannot change the decision.

30 live items + context → RIASEC vector → Mission vector → Tier gate → 3-criterion matrix → 0–3 routes

SCORED SIGNALS + UNVERIFIED PROMPTS · BLOCKS NOT TO SCALE

Interests 50%	Mission evidence 30%	Learning env. 20%	Practical prompts	Not scored

23 / 30
minimum items answered

FLAT
profile → no route

WEAK
all evidence insufficient → no route

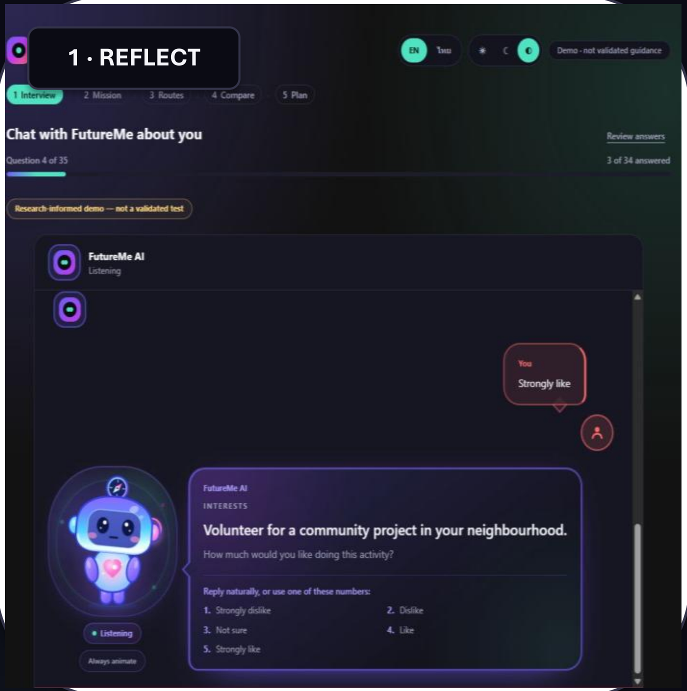
TIES
shown, not falsely ranked

Live scoring uses 30 items. The 1,000-item bank is structurally checked and research-only.

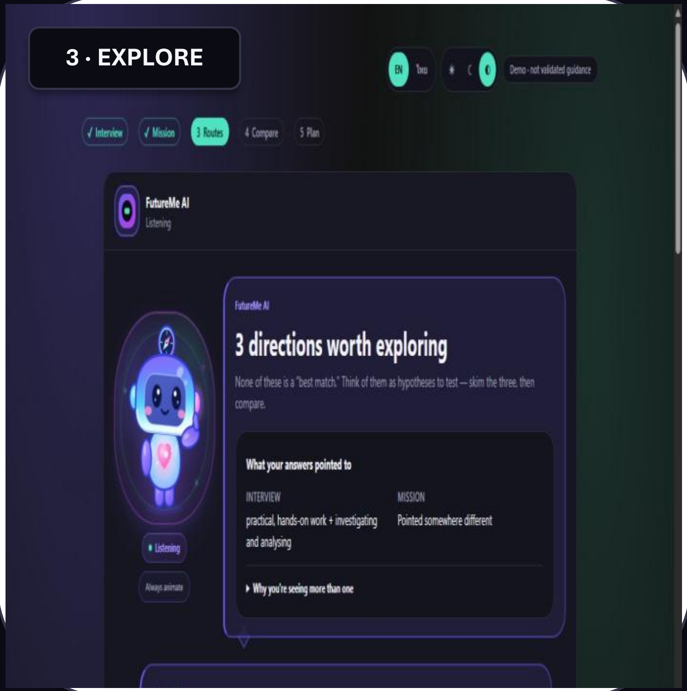
Source: adaptive-engine + decision-engine + future-bank validator (current prototype)

The latest prototype runs end to end

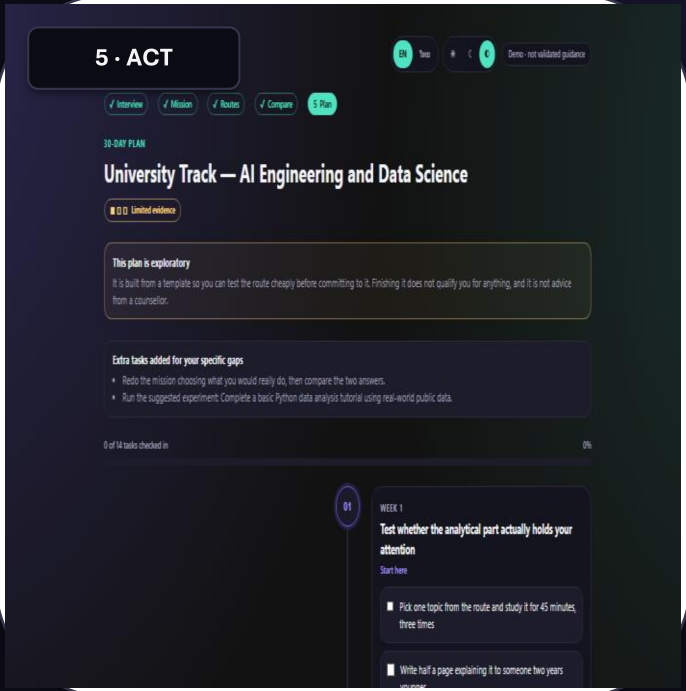
Current app screenshots—not concept mockups. Mascot motion is on by default with a persisted system opt-out.



One item at a time



Several hypotheses



30-day experiment

TH / EN + THEMES | 3 MISSIONS | 12 ILLUSTRATIVE ROUTES | BROWSER-LOCAL | 533 TESTS | 95 E2E

Route profiles and mission rubrics remain illustrative and unvalidated.

Verification rerun 11 Aug 2026: 533 Vitest tests and all 95 Playwright browser journeys passed.

The difference is what happens after the score

FutureMe changes a result into a testable next step.

TRADITIONAL CAREER TEST

FUTUREME EVIDENCE LOOP

1 **Reflect** provisional signal →
2 **Try** independent evidence →
3 **Explore** reasons + unknowns →
4 **Compare** evidence + trade-offs →
5 **Act** 30-day experiment

new evidence updates the next exploration

- ✓ Refuses to guess
- ✓ Shows disagreement
- ✓ No manufactured winner
- ✓ Sources + freshness
- ✓ Vocational routes are first-class

Source: product design and implemented behavior

Validation is the next product—not a footnote

Software and data pipelines are verified. The instrument and outcomes are not.

PIPELINES VERIFIED ≠ PEOPLE VALIDATED

0	**Ethics gate**	Approval · parent consent · student assent · PDPA
1	**Cognitive debrief**	n ≈ 30–40 · meaning and translation
2	**Pilot**	target n = 250 · minimum 200
3	**Measurement**	α + ω · item-total · "not sure" rate
4	**Structure**	RIASEC circular-order randomisation test
5	**Revise + re-pilot**	then invariance and outcome studies

PROPOSED SUCCESS MEASURES

ASSESSMENT	**Reliability · item quality · construct structure**
ROUTES	**Relevance · counsellor agreement · diversity**
EXPERIENCE	**Completion · comprehension · route exploration**
LONG-TERM	**Can the student still explain and defend the choice?**

No reliability, validity, fairness or outcome evidence yet.

Sources: FutureMe validation plan + pre-registered pilot protocol (30 Jul 2026)

From runnable demo to trusted decision support

Current phase: validate with people, not just pipelines.

1	2	3	4	5
Foundation	Runnable prototype	Validation	School pilot	Ecosystem
DONE	DONE	CURRENT · NEXT	PLANNED	EXPLORATORY

Phase 3: expert + student review · questionnaire + mission pilot · licensed dynamic data · bias, privacy + safety audit

Career test → **AI career discovery companion**

ช่วยให้เด็กเข้าใจตัวเอง ทดลองทางเลือก และตัดสินใจด้วยเหตุผลที่อธิบายได้
